

## Which appliances are used?

\*'CLEARSTEP' invisible aligners. The most invisible way to correct minor malalignment of the teeth. Ask us / your dentist for a brochure or visit [www.clearstep.co.uk](http://www.clearstep.co.uk).

\*'Clarity' SL, tooth coloured, fixed brace. This low friction fixed appliance system allows for a shorter treatment whilst making the brace barely visible.

\*'Clarity' and 'Radiance' ceramic fixed appliances for complex treatments where the discreet appearance of the brace is paramount.

Fixed (traintrack) appliances with modern small silver brackets and a choice of 20+ different colours to cover the brace.

Removable functional appliances that enhance the growth of the lower jaw and improve the patient's facial appearance. This can be face transforming for adolescent patients whose upper front teeth 'stick out' due to a backward lower jaw.
